

XR Object Classification

Android XR application that performs on-device image classification using QAIRT/QNN and qnn-net-run.

1. Install APK

```
adb install -r XRObjectClassification.apk
```

2. Push QNN Runtime Files

```
adb shell mkdir -p /data/local/tmp/qnn
```

```
adb push qnn/libQnnHtp.so /data/local/tmp/qnn
adb push qnn/libQnnSystem.so /data/local/tmp/qnn
adb push qnn/libQnnHtpPrepare.so /data/local/tmp/qnn
adb push qnn/libQnnHtpV79Stub.so /data/local/tmp/qnn
adb push qnn/libQnnHtpV79Skel.so /data/local/tmp/qnn
adb push qnn/libQnnTFLiteDelegate.so /data/local/tmp/qnn
adb push qnn/qnn-net-run /data/local/tmp/qnn
```

3. Push Context Binary

```
adb push qnn/mobilenet_v2.bin /data/local/tmp/qnn
```

4. Grant Camera Permission

```
adb shell pm grant com.example.xrobjectclassifier android.permission.CAMERA
```

5. Launch Application

```
adb shell am force-stop com.example.xrobjectclassifier
adb shell monkey -p com.example.xrobjectclassifier 1
```

6. View Logs

```
adb logcat | grep XR_
```
